French engineering student in 2nd year at the École Centrale de Lille, looking for a 6-month assignment in New-Zealand from February 2020 to August 2020 (adaptable)

I am a French First-year Master's student at the École Centrale de Lille, one of the best French multi-disciplinary engineering schools. A hearty eater and lover of French gastronomy, in the long time my main goal is to export French culture abroad creating food stores, especially I'm currently preparing a NVQ in French bakery. My short term objective is to prospect the market on the international stage, so as a part of my course I want to do a year out abroad, in particular in New Zealand and Japan.

WORK EXPERIENCE

THOONSEN TRADING | CAD engineer
Jan. 2019 - Feb. 2019

I went into a 30-people team in a start-up named Thoonsen Trading (selling antitheft devices) in Châteauroux (France) but I mainly worked for a new subsidiary named MOXO an electric bicycle company.

I started with the discovery of the whole production line. After half a week spent doing so, I was ordered by the CEO to finalize a new product: the E-Seat, an off-road electric seat for disabled people. In concrete terms, I had to design the seat with the CAO software Solidworks and then to improve the prototype.

Thus, I designed new parts and printed them with the 3D printer to test those parts before sending the drawing to a producer. In my free time, I also designed parts for a new antitheft device for Thoonsen Trading.

Thanks to this experience, I feel like I improved by far my skills in CAD and 3D printing, and I also think I learnt a lot on how a company works and how departments work with each other.

DARTY | Stock manager
Jul. 2019 – Aug. 2019

I worked with a 10-people team for two months in DARTY in Châteauroux (France) during the summer in order to finance my gap year. That experience was really interesting for me because it was the first time I had worked with that many people, teaching me how to deal with each personality.

The main part of my job was stock management: I had to unload trucks, and then I had to tidy the warehouse. I learnt how to drive a forklift and how to well organize the warehouse.

I also had to prepare orders for customers with the IBM AS/400 Server that I learnt to use.

Finally, in my free time I helped my teammates as a cashier or doing after-sales service activities, and I enjoyed it because I wasn't alone and because I met a lot of different customers.

OTHER EXPERIENCE

UNICEF FRANCE | Young Ambassador
Nov. 2014 – Jun. 2016

I was involved for two years in the UNICEF association as a young Ambassador. I had to organize events in favor of underprivileged people, such as:

- “La Nuit de l’Eau” one night events in partnership with the local swimming pool open to the public. The main goal of this event was to collect funds, selling food products or making people play to a few recreational activities. With those funds we were able to bring water to African villages (for example creating water well).
- Christmas market, where we sold goodies and cakes.
- Public events on the market square to raise awareness among young people on their fundamental rights.

This experience gave me the opportunity to meet altruistic people and reinforced my will to fight inequalities.

OKAE'LILLE | President

Apr. 2019 – Apr. 2020

I was elected president of Okae'Lille, the Japanese culture association at the École Centrale de Lille. As the president I am responsible for organizing events such as:

- Cultural meetings where we promote the Japanese culture to people apart from the association.
- Screening of anime series or Japanese movies to the public
- Introduction to Japanese cooking for students 3 or 4 times a year. In concretes terms we allow people to discover some original Japanese recipes

We also provide extra tutoring to students who are learning Japanese in their homework.

As the president of this association, I developed my skills to motivate people, to organize events, and I liked to take some responsibility.

AWAI PROJECT | Web Hub

Oct. 2018 – Feb 2020

I am involved in a two-year project with a 10-people team named AwAI. Our goal is to develop an AI for the African strategic game Oware, and then to launch it on a web site open to the public to enable people to play it online (in line with chess.com for chess).

In this project, I am a member of the Web Hub and with my teammate we are using the framework Django to develop our website.

INTERSTELL'ART | Responsible for the website

Oct. 2018 – Dec. 2018

I was in charge of creating the website of the Interstell'art group for our election campaign for the job of BDA (the student association responsible for arts and culture during one year in our engineering school).

Those two intense months taught me a lot on cold calling, management, team building and team spirit. It created strong relationship between us and I discovered my strength and weakness when I work in a group.

CERTIFICATIONS / HONOURS

- MOOC Project Management of Rémi Bachelet (2018)
<https://certification.gestiondeprojet.pm/GdP12A/GDP12-CHKWttaXA.pdf>
- Honors at the French choosing test for the International Physics Olympiad (2017)
- Laureate of a national history contest named « Concours National de la Résistance et de la Déportation » (both in 2015 and 2016)
- Participation to the TFJM, a french tournament for young mathematicians (2016)
- Laureate of a national mathematics contest named « Olympiades de Mathématiques de Première » (2015)
- Laureate to the CICERO tournament, a latin culture contest (2014)
